To view the step-by-step guide that will help explain how to switch, go to: www.coreservices.com/switch

Find out how Core Services can help your company reduce costs, gain control, and improve business operations for greater profitability and improved competitiveness.

Why switch to Core?

Hosting @Core is simple, easy and there's no red-tape.

Just ask our customers. Core Services delivers Oracle Applications, configured the way you want them, at a fraction of the cost of in-house and of our competitors. Core Services is one of the largest independently owned hosting companies in the world that specializes exclusively in Oracle Applications. Core focuses on making sure your applications are there when you need them. Our system expertise lets us run your Oracle Applications more efficiently than you can in house or with other ASPs - with a higher performance level.

Why Should I Host?

Guaranteed reliability and availability.

An application service provider (ASP) like Core Services can deliver faster implementations than what could be achieved in-house. By minimizing the total cost of ownership (TCO), the ASP model on average translates into a 30-50% annual savings. Qualified human resources are in high demand, while the market is not providing enough skilled and talented IT workers.

Application Service Providers (ASPs) and Outsourcing Market

By hosting enterprise services, ASPs like Core Services enable smaller business to benefit from enterprise class software packages and systems. While larger companies tend to use ASPs for outsourcing large portions of their IT infrastructure, smaller businesses with lower budgets typically leverage ASPs to gain access to high-end enterprise computing that would be too expensive to run in-house. But no matter the size of the company, using an ASP allows a business to focus its resources on its core competencies and primary business rather than on its information systems and information technology.
