Core Services Continues to Expand West Coast Client Base with SOMA Networks.

Superior customer service improves Oracle provider's business for mid-size and larger companies.

San Francisco, California, March 1st, 2007 – As a leading Oracle Application Service Provider, Core Services intimately understands the daily struggles that their clients experience specifically relating to running Oracle's E-Business Suite. In this highly competitive Oracle ASP market, strategic clients require high-quality customer service. Aware that their client base will seek more effective service providers if they are not satisfied, Core is justifiably proud of its 95% client retention rate

When San Francisco-based SOMA Networks first contacted Keith Inouye, Vice President of Sales and Marketing for Core Services, SOMA expressed a significant dissatisfaction about their then-current hosting provider. After listening to these concerns, Inouye knew that Core Services would be quickly able to provide better service levels and superior Oracle consulting expertise than before. "SOMA expressed significant pains with their Oracle system, and the previous service provider just did not seem to be listening to the patient", explains Inouye. "Core quickly initiated a business plan to fix these issues and provide an immediate positive impact that would resonate through all areas of SOMA Networks' business."

In today's fast-paced business environment, mid-size companies like SOMA Networks need a powerful and responsive Oracle solution provider. Rising to that challenge without delay, Core Services supplied top-level resources to solve SOMA's critical business requirements. Core's consulting team swiftly implemented a solution to a dysfunctional Oracle module, a problem which had been plaguing them for months. By adopting this Core-recommended prescription, SOMA made significant progress in streamlining their operations. These improvements gave Jay Taradash, SOMA Networks Director of Materials, the confidence he needed for a lasting relationship with Core Services. "I have worked with many outsourcing providers in the past, and Core has clearly exceeded all expectations", says Taradash. "In our time of need, Core provided top-level expertise; not only fixing a mission-critical issue in our Oracle system, but taking the time to educate our team as well. We anticipate a very successful partnership moving forward."

SOMA Networks was also searching for an Oracle hosting partner who would manage and monitor their Oracle environment effectively while proactively educating their users. Core's superior leadership through their functional expertise and their proactive hosting

methodology prompted SOMA to switch all of their Oracle services business to Core Services.

This switch enabled SOMA to take full advantage of Core Services' robust end-to-end Oracle solution, with definitively higher service levels than previously experienced. Paul Eller, Controller for SOMA Networks, instantly noticed a difference between service providers. "I have been particularly impressed with Core's responsiveness and customer service", says Eller. "We are very excited to kick-off our partnership with a hosting partner who has shown that through a mutually beneficial service level agreement, expertise in the industry and a dedicated staff, Core truly puts their clients first."

Core Services recognizes that superior, high-quality customer service will continue to drive their business upward. This quality has helped them rapidly expand their business over the last several years with companies similar to SOMA Networks. With the addition of their new offices in San Francisco, California, Core Services will continue growing while keeping their focus on each client's special requirements.

About SOMA Networks:

SOMA Networks, a broadband wireless access market leader, enables communications providers to realize fastest time to market, highest average revenue per subscriber and shortest path to return on investment with the industry's only converged all-IP wireless multimedia applications platform. The FlexMAX platform provides unmatched QoS, subscriber density, and cell coverage to deliver wireline performance over a broadband wireless infrastructure. Service providers worldwide deploy SOMA's award-winning base stations and subscriber gateways because of its superior business case, deployability, support for spectrum bands ranging from 700 MHz through 3.5 GHz, multi-megabit data rates, superior voice quality, non-line-of-sight access, and subscriber self-installation and service activation. A principal member of the WiMAX Forum™, SOMA Networks is headquartered in San Francisco, CA, with offices in Ottawa, Toronto, Delhi, and Singapore.
