netMercury Selects Core Services as Strategic Supply Chain Partner

Successful and Swift Migration to Core Services' Data Center has Positive Impact for netMercury and Its Customers.

Morristown, NJ. March 28th, 2006 – With the increasing intensity of global competition over the past decade, supply chain performance has become a critical differentiator in many industries. netMercury is emerging as a dominant supply chain provider in the global semiconductor manufacturing sector. To fuel its continued success, netMercury formed a strategic supply chain partnership with Core Services Corporation to host its growing Oracle application needs, thus allowing netMercury to focus on its own core competency - Supply Chain Management.

Companies outsource for a variety of reasons. Typically, they look to reduce costs, shorten cycle time, gain information technology, increase expertise, and focus on their core competencies. In choosing Core Services as its Oracle Applications hosting provider, netMercury ensured that they captured these important benefits.

“Supply chain success involves process, people, and technology,” says Dan Wolf, netMercury Director of Engineering & IT. “By outsourcing our application and server management to Core Services, netMercury will be able to cost-effectively remain current on new technology and deploy additional modules from the Oracle E-Business Suite as necessary. Core Services has been able to provide flexible and highly responsive functional resources during our transition to Core Services' data center”, says Wolf. “netMercury will be able to help our customers and partners run their businesses more efficiently and with lower costs, while our own operations remain lean.”

Core Services was challenged to migrate netMercury's Oracle Applications to Core Services' data center and simultaneously begin an upgrade of its Oracle applications. “Core Services designed an aggressive, yet sound, migration and upgrade plan for netMercury,” says Jim Bistis, CEO of Core Services. “We know that netMercury is faced with fierce competition globally and they set high expectations to ensure its ability to meet its customer demands. We were confident that Core Services had the technical depth, expertise, and client-centric focus to meet this demanding requirement.”

“With the migration a success in under 60 days,” says Wolf, “we will continue to expand netMercury's services and fulfill our customer's needs with Core Services as our strategic Oracle Applications and supply chain partner”.

About netMercury

netMercury is an Automated Supply Chain Management (ASCM) services company providing inventory management and advanced logistics support to the semiconductor industry for critical parts, consumables and repairs. netMercury provides the parts and consumables for the equipment that produces the wafers and chips in the semiconductor industry. The company is headquartered in Fremont, CA with offices in Dallas and Austin, TX; Albuquerque, NM; Mesa, AZ; and Williamstown, MA.
